

Empathy Map

Date	July7, 2026
Name	Khushboo Meena
Project Name	Caption AI: AI-Powered Social Media Caption Generator

Empathy Map

I created an empathy map to understand my users from four perspectives: what they say, think, do, and feel in relation to the problem my project addresses. This helped me better understand their needs and build a customer-centric solution.

Says	Thinks
• I want engaging captions for my social media posts. • Writing captions and hashtags manually takes too much time. • I need a tool that can generate content quickly. • The captions should match my brand's style and audience.	• Will the AI-generated caption sound natural? • Can I use the same tool for Instagram, LinkedIn, and Twitter? • I hope the generated content is creative and unique. • I want to save time without affecting content quality.

Khushboo Meena
Digital content creator

Does	Feels
• Enters the campaign topic or product details. • Selects the preferred social media platform. • Chooses the desired tone for the caption. • Generates captions and copies the preferred result for posting.	• Pain: Finds it difficult to create fresh captions regularly. • Pain: Feels stressed when content needs to be posted quickly. • Gain: Happy to receive multiple caption options within seconds. • Gain: Confident that the generated content is ready to use with minimal editing.
