Customer Journey Map

I created a customer journey map to understand how users interact with the CaptionAI application at each stage. This helped identify user actions, touchpoints, thoughts, feelings, and opportunities for improving the overall experience.

Phase of Journey	Stage 1: Access & Input	Stage 2: Content Generation	Stage 3: Review & Copy Output
Actions (What does the customer do?)	Opens the CaptionAI application, enters the product or campaign details, selects the social media platform and preferred tone.	Clicks the Generate button and waits for the AI to generate captions, hashtags, and CTAs.	Reviews the generated content, copies the preferred result, and uses it for social media posting.
Touchpoints (What part of the service do they interact with?)	User interface, input fields, platform selection, tone selection.	Flask backend, Groq API, and AI processing.	Output section, Copy button, and browser interface.
Customer Thoughts (What is the customer thinking?)	"Is this tool easy to use?" "Will it generate captions that match my brand?"	"How quickly will the content be generated?" "Will the results be useful?"	"These captions look good." "I can use them directly for my social media post."
Customer Feelings (What is the customer feeling?)	Curious and excited to try the application.	Hopeful while waiting for the AI-generated results.	Satisfied and confident after receiving useful content quickly.
Process Ownership (Who is responsible?)	Frontend (HTML, CSS, JavaScript)	Backend (Flask Application & Groq API)	Frontend Display and JavaScript Functions
Opportunities (How can we improve?)	Add input validation and character counter.	Display loading progress and	Add history of generated captions and
