

Problem-Solution Fit

Date	July7, 2026
Name	Khushboo Meena
Project Name	Caption AI: AI-Powered Social Media Caption Generator

Problem-Solution Fit

The following framework explains how CaptionAI was designed after understanding the needs, challenges, and working conditions of the target users. The goal is to ensure that the solution directly addresses the real problems faced during social media content creation.

Canvas Block	CaptionAI Analysis
1. Customer Segment (CS)	The primary users of CaptionAI are boutique e-commerce business owners, freelance digital marketers, social media managers, and small marketing agencies that regularly create content for multiple social media platforms.
2. Problems / Pains (PR)	Users spend a considerable amount of time creating engaging captions, selecting suitable hashtags, and modifying content for different social media platforms. This repetitive process often reduces productivity and delays content publishing.
3. Triggers to Act (TR)	Users require a fast solution when launching new products, promoting limited-time offers, or managing multiple social media campaigns within tight deadlines.
4. Emotions Before / After (EM)	Before: Users often feel stressed, confused, and experience creative blocks while writing captions. After: They feel confident, satisfied, and more productive because they can generate ready-to-use captions within seconds.
5. Available Solutions (AS)	Existing AI writing tools can generate text but usually require additional editing and formatting. Manual content writing produces personalized results but consumes significant time. CaptionAI combines automation with platform-specific formatting, making content creation faster and easier.
6. Customer Limitations (CL)	Most users prefer affordable solutions that work on standard computers and do not require technical knowledge, software installation, or programming skills.
7. Behavior & Intensity (BE)	Users create social media content frequently and expect quick results. They prefer tools th
