

AI Prompt Logs

Date	July7, 2026
Name	Khushboo Meena
Project Name	CaptionAI: AI-Powered Social Media Caption Generator

AI Code Generation & Refinement Logs

During the development of CaptionAI, I used AI tools to assist with code generation, interface design, and backend implementation. The generated code was reviewed, tested, and modified according to the project requirements. The following table summarizes the prompts used and the improvements made during development.

S.No	Task / Intent	System Prompt / Context	User Prompt (Given to AI)	AI Output Summary	Refinements / Changes Made
1	Designing the Web Interface	Act as a frontend web developer and help create a responsive user interface.	Create a responsive HTML page for CaptionAI with a text area, platform selection, tone selection, Generate button, and output section using Bootstrap 5.	AI generated the basic HTML structure with input fields, dropdown menus, buttons, and an output area.	I customized the layout, improved the styling, added icons, and organized the interface according to the project requirements.
2	JavaScript Functionality	Act as a JavaScript developer and implement form handling and user interactions.	Write JavaScript to handle form submission, display a loading indicator, show the generated content, and add a copy button for the output.	AI generated JavaScript for form submission, loading animation, and copy functionality.	I modified the code to improve the loader behavior, updated the copy button, and integrated it with the project workflow.

3	Flask Backend & API Integration	Act as a Python developer and build a Flask backend that connects with the Groq API.	Create a Flask application that receives user input, securely loads the API key from the .env file, sends the request to the Groq API, and returns the generated content.	AI generated the initial Flask backend structure with API integration and request handling.	I tested the backend, improved error handling, updated the prompt logic, and connected it successfully with the frontend application.
