| Name         | Khushboo Meena                                       |
| Project Name | CaptionAI: AI-Powered Social Media Caption Generator |

## AI Tools Used

The following AI tools and technologies were used during the development of the CaptionAI project. These tools helped in designing the user interface, developing application features, integrating AI services, and generating social media content.

| S.No | AI Tool / Platform      | Purpose / Use in the Project                                                                                                                                                                | Project Phase                | Benefit                                                                                           |
|------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|---------------------------------------------------------------------------------------------------|
| 1    | Gemini                  | Used to generate and improve HTML, CSS, JavaScript, and Python code. It also assisted in creating project documentation, debugging code, and suggesting UI improvements during development. | Development & Documentation  | Reduced development time, improved code quality, and assisted in preparing project documentation. |
| 2    | Groq API                | Used to connect the Flask application with the AI model and process user requests for generating captions, hashtags, and CTA suggestions.                                                   | Development & Implementation | Enabled fast and reliable AI-powered content generation through secure API integration.           |
| 3    | LLaMA 3.3-70B Versatile | Used as the AI language model to generate platform-specific captions, relevant hashtags, and CTA suggestions based on the user's                                                            | Implementation               | Generated creative and context-aware content, reducing the time required for                      |

|  |  |                                                                  |  |                             |
