

Functional Features Included in the Solution

Date	July7, 2026
Name	Khushboo Meena
Project Name	CaptionAI: AI-Powered Social Media Caption Generator

Functional Features Included in the Solution

I prepared a comprehensive list of all the functional features successfully integrated into my final solution. This helps evaluators understand the scope of my project, the modules I developed, and the exact capabilities my application provides to end users. The complete list of features is presented in the table below.

S. No.	Feature Name	Description & Purpose	Module / Layer	Status
1	Campaign Description Input	Allows users to enter the product or campaign details that will be used to generate customized social media captions.	Presentation / Frontend Layer	Completed
2	Platform Selection	Enables users to choose the target platform, such as Instagram, LinkedIn, or Twitter/X, so that captions are generated according to the selected platform's style and requirements.	Presentation / Frontend Layer	Completed
3	Brand Tone Selection	Lets users choose the preferred writing style, including Casual, Professional, or Promotional, to generate captions that match their brand identity.	Presentation / Frontend Layer	Completed
4	AI Caption Generator	Uses the Llama 3.3 language model through the Groq API to generate multiple caption options based on the user's campaign description and selected tone.	Core Logic / API Layer	Completed

5	Hashtag Generator	Automatically suggests relevant hashtags related to the campaign to improve the reach and visibility of social media posts.	Core Logic / API Layer	Completed
6	Call-to-Action (CTA) Generator	Generates suitable call-to-action statements that encourage users to engage with the post, visit a website, or purchase a product.	Core Logic / API Layer	Completed
7	Loading Indicator	Displays a loading animation while the caption is being generated and temporarily disables the submit button to prevent duplicate requests.	Presentation Layer (JavaScript)	Completed
8	Copy to Clipboard	Allows users to copy the generated captions with a single click, making it easier to reuse the content on different social media platforms.	Presentation Layer (JavaScript)	Completed
